Abstracts

The global Automotive I2C EEPROM market size is predicted to grow from US$ 270 million in 2025 to US$ 484 million in 2032; it is expected to grow at a CAGR of 8.6% from 2026 to 2032.

Automotive I2C Serial EEPROMs are high?reliability non?volatile memory chips with I2C bus interface, specifically designed for automotive electronic systems. Complying with AEC?Q100 automotive standards, they feature wide operating temperature range (?40? to 125?), strong anti?interference capability, long data retention (up to 100 years) and high write/erase endurance, meeting the long?term stable data storage requirements of core components such as automotive powertrain systems, body control, smart cockpits and ADAS.

The price of automotive I2C serial EEPROMs varies by storage capacity, package type, temperature grade and purchase volume. The unit price of mainstream AEC?Q100 Grade 1 SOIC?8 packaged products ranges from 0.35 to 2.60 US dollars each. Small?capacity (1K?16Kbit) models are priced at 0.35 to 0.70 US dollars each, while medium and large?capacity (32K?1024Kbit) models cost 0.65 to 2.60 US dollars each. Bulk orders enjoy a discount of 10% to 20%. The industrial chain is well?developed. The upstream includes high?purity wafers, special photoresists, automotive?grade chemical raw materials and precision electronic auxiliary materials. The midstream focuses on chip design, wafer fabrication, automotive?grade testing and packaging. Professional manufacturers at home and abroad (such as ST, Microchip, Giantec Semiconductor) occupy a major market share. The downstream serves automotive Tier1 suppliers, vehicle manufacturers and system integrators, widely used in electronic control systems of new energy vehicles and traditional fuel vehicles, forming a complete industrial chain from raw material supply and chip production to end automotive
