The automotive interior material flammability tester is a professional testing equipment used to evaluate the flame retardant properties of vehicle interior materials (such as seat fabrics, dashboards, ceilings, etc.). By simulating flame contact, thermal radiation and other conditions, it measures the burning speed, smoke density and toxic gas release of the material to ensure compliance with international safety standards (such as FMVSS 302, ISO 3795, GB 8410). The instrument is usually composed of a combustion chamber, an ignition device, a timing system and a data acquisition module. It can accurately control the test temperature, flame height and air flow rate, and is widely used by automobile manufacturers, material suppliers and third-party testing agencies.
