With a transparent methodology based on hundreds of bottom-up qualitative and quantitative market inputs, this study forecast offers a highly nuanced

view of the current state and future trajectory in the global Automotive Leaf Spring.

The global Automotive Leaf Spring market size is projected to grow from US\$ 4341.9 million in 2022 to US\$ 5573.2 million in 2029; it is expected to grow at a CAGR of 5573.2 from 2023 to 2029.

The leaf spring has simple structure, reliable operation, low cost and simple maintenance. It can transmit various forces and moments, determines the jumping trajectory of the wheel, and at the same time, it also has a certain friction damping effect. However, it can only be used for non-independent suspensions, which are heavy, stiff, poorly comfortable, and have a long longitudinal dimension (not conducive to shortening the front and rear overhangs of the car), and the leaf spring pins at the joint with the frame are prone to wear.

This report presents a comprehensive overview, market shares, and growth opportunities of Automotive Leaf Spring market by product type, application, key manufacturers and key regions and countries.
