LED linear is a light-emitting diode lamp that is assembled in a system, tube or lamp, as well as lighting fixtures of different sizes and specifications. LED lights have long service life and higher electrical efficiency. They are better used than fluorescent or conventional lamps. LED linear lamps provide excellent brightness without taking time to warm up. The auto industry is paying more attention to leds. In vehicles, leds are linear for decorative purposes to provide better views at night and in fog. It is also used to interrupt applications. LED linear is mainly used in spoiler boards, normal headlights and indicators. The key application of linear LED in heavy duty commercial vehicles is to provide better visibility at night and improve safety. LED linear contains lead and arsenic materials that are harmful to the environment and humans. These factors may hinder the growth of LED linear lighting during the forecast period.
