The global Automotive Low Voltage Lithium Battery market size is predicted to grow from US$ 259 million in 2025 to US$ 414 million in 2032; it is expected to grow at a CAGR of 7.1% from 2026 to 2032.

An automotive low voltage lithium battery is a lithium-ion-based battery designed to operate at voltages typically below 60 volts, commonly used in 12V, 24V, or 48V systems in vehicles. Unlike high-voltage batteries found in electric vehicle (EV) propulsion systems, these low-voltage lithium batteries are primarily used to replace traditional lead-acid batteries in functions such as engine start-stop systems, auxiliary power supply, lighting, infotainment, and advanced driver assistance systems (ADAS).

The automotive low-voltage lithium battery market?primarily encompassing 12V and 48V lithium-ion batteries used for functions like start-stop systems, infotainment, and electronic control units?is experiencing steady growth as automakers transition from traditional lead-acid batteries to more efficient, lightweight, and longer-lasting lithium-based alternatives. This expansion is driven by the rising adoption of electric and hybrid vehicles, the shift toward lithium iron phosphate (LFP) chemistries for cost and safety benefits, and the industry's push for enhanced energy efficiency and sustainability. Key players include Camel Group and BYD, with China leading in both production and technological advancements in this sector.?
