Automotive magnetorheological suspension is an advanced suspension system that uses a new type of intelligent material, magnetorheological fluid (mrf). The magnetorheological effect is generated by passing an electric current through a magnetic field, which changes the viscosity of the magnetorheological fluid, thereby changing the damping force of the damper. Magnetorheological suspension can achieve instantaneous and precise control of the damping force. It has a simple structure, low power consumption, is insensitive to impurities, improves controllability and stability, and has strong adaptability. It is widely used in the automotive field.

The global Automotive Magnetorheological Suspension market size is projected to grow from US\$ million in 2024 to US\$ million in 2030; it is expected to grow at a CAGR of %from 2024 to 2030.
