The global Automotive Micro Motor Iron Core market size is predicted to grow from US$ 1109 million in 2025 to US$ 1860 million in 2032; it is expected to grow at a CAGR of 7.8% from 2026 to 2032.

The iron core of automotive micro special motors is the main component used to support and fix the motor coils in micro special motors. In micro motors, the iron core mainly plays a role in building magnetic circuits, supporting coils, and transmitting electromagnetic forces. When current passes through the coils of an electric motor, the generated magnetic field generates magnetic flux in the iron core, thereby achieving the conversion of electrical energy into mechanical energy. With the widespread application of electronic technology (such as information systems, navigation systems, car audio systems, TV entertainment systems, in car communication systems, internet systems, etc.) in automobiles, the application of micro motors in automobiles will also become more extensive, and their number of applications will increase accordingly. Although the automotive industry has experienced years of rapid development and has faced a slowdown in sales growth in the past two years, considering the upgrading of automotive configurations and the gradual rise of new energy vehicles, the growth rate of the number of micro special motors used in the automotive industry will be better than that of the entire vehicle market. In addition, with the gradual rise of the automotive aftermarket in the future, the demand for updating micro special motors in the maintenance market will also increase. At the same time, the development of emerging fields has brought new growth points for the growth of micro motors.

United States market for Automotive Micro Motor Iron Core is estimated to increase from US$ million in 2025 to US$ million by 2032, at a CAGR of % from 2026 through 2032.
