A HUD - Head Up Display - is a means of presenting information to the pilot in the line of their external forward vision which projects key flight instrument data onto a small 'see-through' screen positioned just in front of the pilot line of sight looking ahead out of the aircraft. Automotive Head-up Display (HUD) is a digital transparent image that displaying the same information you would get from the dashboard. This can include everything from your current speed to the revs on your engine, and even various temperature gauges. There are two types of HUD. The first is to treat the back of the windshield in such a way that an image projected onto it will reflect to the driver. The second is to have a small combiner that is separate from the windshield. Combiners can be retracted.
