Automotive O-rings are circular, rubber sealing components used extensively in vehicles to prevent the leakage of fluids and gases. Made from various materials such as Nitrile, Viton, silicone, and EPDM, these O-rings are designed to fit into grooves and create a tight seal between two or more parts in an assembly. They are commonly found in engines, fuel systems, air conditioning systems, and transmissions, ensuring the proper functioning of various automotive systems by maintaining pressure and preventing contaminants from entering sensitive areas. Their durability, resistance to high temperatures, and compatibility with different fluids make them essential for vehicle maintenance and performance.

United States market for Automotive O Rings is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.
