An Automotive Occupant Monitoring System is an in-cabin sensing solution designed to detect, classify and monitor vehicle occupants using cameras, infrared sensors, radar or sensor fusion technologies. It supports intelligent airbag deployment, seatbelt reminders, driver assistance, child presence detection and compliance with vehicle safety regulations. The system processes occupant position, posture and movement in real time and is intended for integration into passenger vehicles rather than commercial surveillance or security applications.

The upstream industry includes image sensors, infrared emitters, radar chips, processors, lenses, electronic components and software algorithms. Midstream covers module integration, embedded software development, system calibration, validation and vehicle certification. Downstream applications include passenger vehicles, electric vehicles, intelligent cockpits and advanced driver assistance systems. Market growth is driven by stricter automotive safety regulations and increasing penetration of intelligent cabin technologies.
