In an automobile internal combustion engine, the engine bearing is usually a journal or a plain bearing on which the crankshaft rotates. The function of a bearing is to hold the crankshaft in place and to prevent the dislodging of connecting rod from the crankshaft. The engine bearing also plays a vital role in prevention of the force created by the piston and its transmission to the crankshaft, instead using the forces for the conversion of the reciprocating movements into rotation.

Automotive is a key driver of this industry. According to data from the World Automobile Organization (OICA), global automobile production and sales in 2017 reached their

peak in the past 10 years, at 97.3 million and 95.89 million respectively. In 2018, the global economic expansion ended, and the global auto market declined as a whole. In 2022, there will wear units 81.6 million vehicles in the world. At present, more than 90% of the world's automobiles are concentrated in the three continents of Asia, Europe and North America, of which Asia automobile production accounts for 56% of the world, Europe accounts for 20%, and North America accounts for 16%. The world major automobile producing countries include China, the United States, Japan, South Korea, Germany, India, Mexico, and other countries; among them, China is the largest automobile producing country in the world, accounting for about 32%. Japan is the world's largest car exporter, exporting more than 3.5 million vehicles in 2022.
