A plug-in hybrid, sometimes called a plug-in hybrid electric vehicle (PHEV), is a hybrid vehicle with a high-capacity battery that can be recharged by plugging into a power outlet or charging station. They can store enough power to significantly reduce oil consumption under typical driving conditions. Plug-in hybrid electric vehicles (phevs) use electric motors to capture power in addition to internal combustion engines. These vehicles can be charged from the outside, which allows them to travel longer distances. The motors used in phevs help reduce fuel consumption and pollution.
