Polyolefin Elastomers (POEs) in automotive contexts refer to synthetic materials derived from olefin monomers, such as ethylene and propylene, that exhibit a unique balance of characteristics ideal for automotive components. These materials are thermoplastic elastomers (TPEs), offering a blend of flexibility, durability, and resistance to environmental factors like heat, chemicals, and UV radiation. In automotive engineering, POEs are commonly utilized in the manufacturing of interior and exterior components, such as seals, gaskets, weather stripping, bumpers, interior trim, and under-the-hood applications. Their attributes contribute to improved performance, longevity, and cost-effectiveness in automotive part production, making them integral to modern vehicle design and manufacturing processes.
