The pop-up invisible door handle of a car is a door handle with a novel design, which is usually hidden on the surface of the car door and will only pop up automatically when needed to facilitate the user to open the door. This design can improve the overall aesthetics of the vehicle's appearance, while also reducing aerodynamic resistance, which is beneficial to improving the vehicle's fuel economy. Invisible door handles usually use electronic induction or mechanical triggering. When the user approaches the vehicle or presses a specific position on the door, the door handle will pop up from the car body for user operation. This kind of design is more common on some high-end models or concept models, reflecting the innovation and technological sense of car design.
