Abstracts

The global Automotive Radar Sensors market size is predicted to grow from US\$ million in 2025 to US\$ million in 2031; it is expected to grow at a CAGR of %from 2025 to 2031.

The impact of the latest U.S. tariff measures and the corresponding policy responses from countries worldwide on market competitiveness, regional economic performance, and supply chain configurations will be comprehensively evaluated in this report.

Automotive radars are driver assistance systems that use sensors to detect the speed and range of objects in proximity of the vehicle. It is a core sensor (range, speed) of driver assistance systems: long range (LRR) for Adaptive Cruise Control, medium range (MRR) for cross traffic alert and lane change assist, short-range (SRR) for parking aid, obstacle/pedestrian detection. A key component of ADAS is radar systems that constantly sense the distance between vehicles in real-time, improving driving efficiency and safety.

Automotive radar sensors are used in various applications, such as autonomous braking, forward collision warning system, adaptive cruise control, lane departure warning, adaptive headlights, blind spot detection, and parking assistance. Major automakers across the globe started to integrate basic collision avoidance systems into their mass-market models. Owing to the increased number of road accidents, emphasis is on improved road safety regulations and laws for making vehicles safe for driving. This, in turn, is increasing the consumption of advanced driver-assistance systems (ADAS) and the demand for the automotive radar sensors market.

Automotive is a key driver of this industry. According to data from the World Automobile

Organization (OICA), global automobile production and sales in 2017 reached their peak in the past 10 years, at 97.3 million and 95.89 million respectively. In 2018, the global economic expansion ended, and the global auto market declined as a whole. In 2022, there will wear units 81.6 million vehicles in the world. At present, more than 90% of the world's automobiles are concentrated in the three continents of Asia, Europe and North America, of which Asia automobile production accounts for 56% of the world, Europe accounts for 20%, and North America accounts for 16%. The world major automobile producing countries include China, the United States, Japan, South Korea, Germany, India, Mexico, and other countries; among them, China is the largest automobile producing country in the world, accounting for about 32%. Japan is the world's largest car exporter, exporting more than 3.5 million vehicles in 2022.
