The automotive rear camera module of the car is used as an electronic signal adapter. Through this module, the image signal obtained by the camera is transcoded into a digital signal, and then the digital signal is transmitted to the screen-side decoder through a data transmission cable, and the electronic rear camera is connected. The acquired image is clearly displayed on the screen to facilitate the user to observe the environment within the visual range of the camera, which is mainly used in the car reversing system.
