Automotive is a key driver of this industry. According to data from the World Automobile Organization (OICA), global automobile production and sales in 2017 reached their peak in the past 10 years, at 97.3 million and 95.89 million respectively. In 2018, the global economic expansion ended, and the global auto market declined as a whole. In 2022, there will wear units 81.6 million vehicles in the world. At present, more than 90% of the world's automobiles are concentrated in the three continents of Asia, Europe and North America, of which Asia automobile production accounts for 56% of the world, Europe accounts for 20%, and North America accounts for 16%. The world major automobile producing countries include China, the United States, Japan, South Korea, Germany, India, Mexico, and other countries; among them, China is the largest automobile producing country in the world, accounting for about 32%. Japan is the world's largest car exporter, exporting more than 3.5 million vehicles in 2022. The application of wireless reversing camera is very beneficial for both commercial vehicles and passenger vehicles. In commercial vehicles such as trucks and vans, wireless backup cameras increase safety by providing a clear view of the vehicle's surroundings, reducing blind spots and enabling the driver to spot obstacles or pedestrians. Likewise, in passenger cars, cameras ensure safer and easier parking maneuvers, preventing accidents and property damage. Rising number of fatalities during vehicle reversing and growing concerns over the safety of passengers and pedestrians are the major factors driving the growth of the market. Apart from this, emerging applications of automotive backup camera systems in commercial vehicles such as trailers and tow trucks, which cover a larger area on the road and require assistance while parking or reversing, are stimulating the product demand. Additionally, governments are introducing strict regulations requiring backup cameras to be installed on all new passenger cars to reduce the risk of pedestrians being involved in accidents when reversing. This coupled with rising demand for Advanced Driver Assistance Systems (ADAS) is driving the market growth. Moreover, several leading manufacturers are investing heavily in the development of innovative product variants to expand their customer base and maintain a competitive edge in the market. Other factors, including surging sales of premium

vehicles, rising consumer disposable income, rapid urbanization, and technological advancements are also creating a positive market outlook.
