In 2018, the global economic expansion ended, and the global auto market declined as a whole. In 2022, there will wear units 81.6 million vehicles in the world. At present, more than 90% of the world's automobiles are concentrated in the three continents of Asia, Europe and North America, of which Asia automobile production accounts for 56% of the world, Europe accounts for 20%, and North America accounts for 16%. The world major automobile producing countries include China, the United States, Japan, South Korea, Germany, India, Mexico, and other countries; among them, China is the largest automobile producing country in the world, accounting for about 32%. Japan is the world's largest car exporter, exporting more than 3.5 million vehicles in 2022. The growth of the industry is greatly supported by the exponential development of the automotive industry owing to the increasing demand for passenger and commercial vehicles owing to the growing global population and increasing disposable income. In terms of sales channels, the continuous expansion of the global automotive industry has led to a surge in the deployment of SLI batteries in new vehicles. Global car ownership is growing, according to the International Organization of Motor Vehicle Manufacturers (OICA). Also, non-OEM goods are less expensive but less functional and come with no warranty, which has led to an increase in consumer preference for OEM batteries, further complementing the industry expansion.
