Retrofitting an old vehicle into an electric vehicle is a new way to reduce pollution and promote zero-emission. Retrofit electric vehicles include replacement of the engine and fuel tank with a battery and battery charger, respectively. Retrofitted electric vehicles do not require gears and can travel up to 150km on a single charge. According to Central Motor Vehicle Rule, 1989, of India, the conversion of engine powered vehicles into pure electric operation with fitment of electric kit would be permitted if the vehicle was manufactured on or after January 1, 1990.
