Automotive Rolling Road Device, also known as a dynamometer or dyno, is a testing tool used to measure the performance of vehicles by simulating road conditions. The device consists of rollers that support the vehicle's wheels while measuring parameters like horsepower, torque, and emissions. It aids in diagnosing issues, tuning engines, and evaluating a vehicle's capabilities in a controlled environment.

Automotive is a key driver of this industry. According to data from the World Automobile Organization (OICA), global automobile production and sales in 2017 reached their peak in the past 10 years, at 97.3 million and 95.89 million respectively. In 2018, the global economic expansion ended, and the global auto market declined as a whole. In 2022, there will wear units 81.6 million vehicles in the world. At present, more than 90% of the world's automobiles are concentrated in the three continents of Asia, Europe and North America, of which Asia automobile production accounts for 56% of the world, Europe accounts for 20%, and North America accounts for 16%. The world major automobile producing countries include China, the United States, Japan, South Korea, Germany, India, Mexico, and other countries; among them, China is the largest automobile producing country in the world, accounting for about 32%. Japan is the world's largest car exporter, exporting more than 3.5 million vehicles in 2022.
