Automotive seat climate technology keeps up driver and traveler's seats temperature to an agreeable level during travels. The technology warms the seats in icy temperature and to cool the seats in tropical and hot conditions.

Automotive seat climate systems comprises of the following parts – electronic control unit (ECU), seat ventilation system, seat warming system and neck conditioner system. The ECU framework is inserted in an automotive seat climate framework and controls its general functioning. Seat ventilation system gives a comfortable sensation to the driver and traveler seats by evacuating the warmth caught between the body and seat in tropical situations. Seat warming systems help to control the temperature of the

vehicle seat. Fans and incorporated thermoelectric technology influence the seats to warm or cool as indicated by client needs. Neck conditioner gives warmed or cooled air through seat necks giving solace to driver and travelers.
