The global Automotive Shredded Residue Recycling market size is predicted to grow from US\$ 1160 million in 2025 to US\$ 1816 million in 2032; it is expected to grow at a CAGR of 6.7% from 2026 to 2032.

Automotive Shredded Residue (ASR) recycling is a process that deals with the waste generated after a vehicle is shredded at the end of its life. Once the recyclable metals are removed, about 20-30% of the vehicle remains as ASR, which consists of plastics, rubber, glass, foam, fibers, and other non-metallic materials. ASR recycling involves separating these materials for recovery and reuse, reducing the amount sent to landfills. Advanced technologies like flotation, air classification, and chemical treatment are used to recover valuable components and convert non-recyclable fractions into energy or other by-products. ASR recycling is essential in achieving circular economy goals, as it enhances resource efficiency, reduces environmental impact, and aligns with regulations aimed at minimizing automotive waste.
