Market players need to invest in research and development, forge strategic partnerships, and align their offerings with evolving consumer preferences to capitalize on the immense opportunities presented by the Automotive Slipper Clutch market.

An automotive slipper clutch is a torque limiter with an integrated freewheel mechanism, which allows the clutch to partially disengage while decelerating the speed of vehicles. It reduces overall momentum and sudden forces inside the transmission and helps minimize engine braking and increase transmission longevity. Besides this, it absorbs shock and vibrations, prevents rear-wheel lock up and engine seizure and improves the performance of vehicles. Currently, the automotive slipper clutch with an anti-lock braking system (ABS) is gaining traction as it reduces the chances of accidents or collisions and enhances the braking system of vehicles.

Automotive is a key driver of this industry. According to data from the World Automobile Organization (OICA), global automobile production and sales in 2017 reached their

peak in the past 10 years, at 97.3 million and 95.89 million respectively. In 2018, the global economic expansion ended, and the global auto market declined as a whole. In 2022, there will wear units 81.6 million vehicles in the world. At present, more than 90% of the world's automobiles are concentrated in the three continents of Asia, Europe and North America, of which Asia automobile production accounts for 56% of the world, Europe accounts for 20%, and North America accounts for 16%. The world major automobile producing countries include China, the United States, Japan, South Korea, Germany, India, Mexico, and other countries; among them, China is the largest automobile producing country in the world, accounting for about 32%. Japan is the world's largest car exporter, exporting more than 3.5 million vehicles in 2022.
