The global Automotive SMD NTC Thermistors market size is predicted to grow from US\$ 94.23 million in 2025 to US\$ 158 million in 2032; it is expected to grow at a CAGR of 7.8% from 2026 to 2032.

In 2025, global Automotive SMD NTC Thermistor production reached approximately 5351 M Units, with an average global market price of around 18 USD per K Units.

Automotive SMD NTC Thermistors refer to surface-mount negative temperature coefficient thermistors designed for automotive electronic systems. Their resistance decreases as temperature increases, enabling temperature sensing, temperature compensation, thermal protection, and thermal management in vehicle electronic circuits and modules.

Automotive SMD NTC Thermistors, with their unique characteristics of miniaturization, wide temperature range stability, high sensitivity and fast response, and automotive-grade high reliability, perfectly adapt to the harsh operating conditions and high-density PCB mounting requirements of automotive applications. They precisely solve the industry pain points of traditional through-hole components, such as large size, shock and temperature difference resistance, slow response, insufficient consistency, and difficulty in adapting to automated mass production. At the same time, they meet the core requirements of high precision, high stability, and high safety of temperature sensing in the three-electric systems of new energy vehicles. At the industry driving level, the continuous increase in the penetration rate of electric vehicles, the increasing complexity of automotive electronic architecture, and the upgrading of battery thermal management safety requirements are jointly creating strong growth momentum. In the future, with the deep integration of automotive intelligence and electrification, the

application scenarios of products will continue to expand, the market penetration space is vast, and the growth potential is huge, making it a highly valuable core track in the field of automotive electronic temperature control.

The upstream raw materials for automotive SMD NTC Thermistors mainly include Mn_2O_3 , MnO , NiO , Co_2O_3 , CuO , Fe_2O_3 , etc. Typical suppliers include Umicore, Sumitomo Metal Mining, Eramet, Jinchuan Group, Huayou Cobalt, GEM, Xiangtan Electrochemical, American Elements, Kojundo Chemical Laboratory, etc. The downstream applications are mainly in automotive battery management systems, power electronics, automotive lighting, and other fields.

The single-line production capacity of automotive SMD NTC Thermistors varies greatly depending on the product model, technical solution, degree of automation, and yield. The overall gross profit margin of the industry is in the range of 30%-40%.

United States market for Automotive SMD NTC Thermistors is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.

China market for Automotive SMD NTC Thermistors is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.

Europe market for Automotive SMD NTC Thermistors is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.
