A spring brake chamber is a brake chamber that includes both service brake and spring brake sections. The spring brake section houses a powerful spring that acts as a parking brake or an emergency brake when air pressure is not applied to that section of the brake chamber. The two sections of a spring brake act independently of each other and have their own air supplies and diaphragms. Spring brake chambers apply the brakes by means of a large coil spring that provides enough force to hold the brakes in the applied position, instead of using air to apply the brakes.
