The car start-stop system is a technology designed to reduce vehicle fuel consumption and emissions. The system automatically shuts down the engine when the car is stopped, such as when it is stopped at a traffic light or when the vehicle is stopped in a traffic jam. Once the driver releases the brake or presses the accelerator pedal, the system quickly restarts the engine so that the vehicle can continue to move. This technology saves fuel by reducing the engine idling time, especially in city driving conditions.

The global Automotive Start-Stop System market size is projected to grow from US\$ 39.1 million in 2024 to US\$ 80.7 million in 2030; it is expected to grow at a CAGR of 12.9% from 2024 to 2030.
