A supercharger is a method of forced induction of engine, where an air compressor is used to increase the pressure or density of air supplied to an internal combustion engine. The supercharger uses belts and chains, which are connected to the engine, helping it to drive the compressor. The compressed air provides the engine with more oxygen, letting it burn more fuel; thereby increasing the power of the engine. An automotive supercharger is a system used to increase the power output of an automobile by compressing the atmospheric air. The system is mainly integrated into cars and motorcycles.

Automotive is a key driver of this industry. According to data from the World Automobile Organization (OICA), global automobile production and sales in 2017 reached their

peak in the past 10 years, at 97.3 million and 95.89 million respectively. In 2018, the global economic expansion ended, and the global auto market declined as a whole. In 2022, there will wear units 81.6 million vehicles in the world. At present, more than 90% of the world's automobiles are concentrated in the three continents of Asia, Europe and North America, of which Asia automobile production accounts for 56% of the world, Europe accounts for 20%, and North America accounts for 16%. The world major automobile producing countries include China, the United States, Japan, South Korea, Germany, India, Mexico, and other countries; among them, China is the largest automobile producing country in the world, accounting for about 32%. Japan is the world's largest car exporter, exporting more than 3.5 million vehicles in 2022.
