The global Automotive Surround View Lens market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of %from 2026 to 2032.

Automotive Surround View Lens is a specialized optical component used in automotive surround view systems. These systems integrate multiple cameras positioned around a vehicle to provide a bird's-eye view, enhancing driver visibility and safety during maneuvers such as parking and low-speed driving. The lens captures images from different angles and distances, which are then processed and stitched together to create a comprehensive view of the vehicle's surroundings. This technology aids drivers in avoiding obstacles, navigating tight spaces, and improving overall situational awareness, thereby reducing the risk of accidents.

The industry trend for Automotive Surround View Lenses is characterized by advancements in imaging technology, sensor integration, and artificial intelligence algorithms. Manufacturers are constantly innovating to improve image quality, reduce system latency, and enhance overall performance. Additionally, there's a growing focus on incorporating augmented reality features, such as overlaying trajectory lines and obstacle detection alerts, to further assist drivers in maneuvering safely. As automotive safety standards continue to evolve and consumer demand for advanced driver assistance systems increases, the market for Automotive Surround View Lenses is expected to expand, with a strong emphasis on innovation and integration with autonomous driving technologies.
