The vehicle sensor is the input device of the vehicle computer system. It converts the information of various operating conditions, such as vehicle speed, temperature of various mediums, engine operating conditions, etc. , into electrical signals for transmission to the computer So that the engine is in perfect working condition. The temperature and humidity sensor is just one of the sensors. It is only used to measure the temperature and humidity in the air through a certain detecting device. After measuring the temperature and humidity, it is transformed into an electric signal or other needed information output according to a certain law To meet the needs of the users.
