The car test site is the place where the road test of the whole vehicle is carried out. The car test site includes a circular track where cars drive at high speed, a car test field, rough roads that can cause strong bumps in the car, dynamic squares, ramps, etc. The relevant performance of automobiles will change in different regions and climatic environments. For example, non-metallic parts, rubber parts, fuel and lubricants of automobiles, and power batteries of new energy vehicles are easily affected by high and low temperature environments. The dynamic performance of automobiles, driving performance and braking performance are easily affected by altitude, so it is very important and necessary to carry out the development and verification of automobile environmental adaptability test.
