The global Automotive Thermal Cutoff market size is predicted to grow from US\$ 46.97 million in 2025 to US\$ 79.93 million in 2032; it is expected to grow at a CAGR of 7.9% from 2026 to 2032.

Automotive thermal cutoff is a one-shot, non-resettable over-temperature protection device used in automotive electronics, motors, heaters, and auxiliary circuits. It opens the circuit when a preset temperature is reached, helping prevent overheating, thermal runaway, and fire risk. In narrower technical segmentation, it can include organic-type OTCO and alloy-type ATCO routes.

Upstream mainly rely on a thermal-fusible material system?such as low-melting-point alloys/temperature-sensitive fusible elements, springs and contact metals, lead wires/terminals, ceramic or resin housings and potting/encapsulation compounds?together with automated assembly lines and calibration/verification test equipment. Downstream are primarily supplied into Tier-1 harness suppliers and module makers for thermal management, seat systems, and e-drive/power electronics, and are then qualified and launched along with OEM vehicle platforms.

In 2025, global automotive thermal cutoff production reached approximately 800 million units, with an average global market price is \$60 per k unit.

United States market for Automotive Thermal Cutoff is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.
