The global Automotive Thermal Management Valve market size is predicted to grow from US\$ 4939 million in 2025 to US\$ 5973 million in 2031; it is expected to grow at a CAGR of 3.2% from 2025 to 2031.

In a fuel-injected engine, the throttle valve is placed on the entrance of the intake manifold, or housed in the throttle body. In a carbureted engine, it is found in the carburetor. When a throttle is wide open, the intake manifold is usually at ambient atmospheric pressure. In internal combustion engines, exhaust gas recirculation (EGR) is a emissions reduction technique used in petrol/gasoline and diesel engines to reduce nitrogen oxide. EGR works by recirculating a part of an engine's exhaust gas back to the engine cylinders

Global automotive thermal management valve main manufacturers include Aisan, Continental, Denso, Rheinmetall Automotive, Bosch, etc., totally accounting for about 35% of the market. China is the largest market, with a share over 30%. As for the types of products, it can be divided into intake throttle valve and exhaust throttle valve. The most common product is exhaust throttle valve, with a share over 83%. In terms of applications, it is widely used in passenger vehicle and commercial vehicle. The most common application is passenger vehicle, with a share about 78%.
