An automotive thermoelectric refrigerator is a cooling system used in vehicles that operates on the principles of thermoelectric cooling. This technology utilizes the Peltier effect, where an electric current passing through two different conductors creates a temperature difference between them. In a thermoelectric refrigerator, heat is transferred from one side of the thermoelectric module to the other, resulting in cooling one side and heating the other. The cooled side can be used to refrigerate the storage compartment, making it a compact and energy-efficient cooling solution for automotive applications.

The global Automotive Thermoelectric Refrigerator market size is projected to grow from US\$ million in 2024 to US\$ million in 2030; it is expected to grow at a CAGR of %from 2024 to 2030.
