The global Automotive Tire Tread Depth Scanner market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of % from 2026 to 2032.

A tire tread depth scanner is a specialized instrument used to measure the depth of tread on tires, which is the grooved pattern on the tire's surface that provides traction and grip on the road. The scanner uses a laser or light source to illuminate the tire's surface and a sensor to detect the changes in light intensity as the laser beam passes through the tread grooves. The resulting data is then used to calculate the depth of the tread grooves and the overall condition of the tire. Tire tread depth scanners are commonly used by automotive technicians, mechanics, and enthusiasts to assess the remaining life of a tire and ensure optimal performance and safety on the road.
