According to our LPI (LP Information) latest study, the global Automotive Transceivers market size was valued at US\$ 4057.9 million in 2023. With growing demand in downstream market, the Automotive Transceivers is forecast to a readjusted size of US\$ 5282 million by 2030 with a CAGR of 3.8% during review period.

The research report highlights the growth potential of the global Automotive Transceivers market. Automotive Transceivers are expected to show stable growth in the future market. However, product differentiation, reducing costs, and supply chain optimization remain crucial for the widespread adoption of Automotive Transceivers. Market players need to invest in research and development, forge strategic partnerships, and align their offerings with evolving consumer preferences to capitalize on the immense opportunities presented by the Automotive Transceivers market.

Because of the increasing demand for data exchange in modern vehicles, the automotive industry implemented networks like CAN (Controller Area Network), LIN (Local Interconnect Network) and FlexRay protocol-based bus systems. In the future, cars will have more electronic control units (ECUs) which will feature an even higher level of functionality. Therefore, the importance of in-vehicle networking devices increases due to the larger quantity of data exchanged between the ECUs. As a result the automotive industry newly established the CAN FD (Flexible Data-rate) protocol for faster CAN communication up to 5Mbit/s and CAN PN (Partial Networking) for improved energy efficiency.

Automotive is a key driver of this industry. According to data from the World Automobile

Organization (OICA), global automobile production and sales in 2017 reached their peak in the past 10 years, at 97.3 million and 95.89 million respectively. In 2018, the global economic expansion ended, and the global auto market declined as a whole. In 2022, there will wear units 81.6 million vehicles in the world. At present, more than 90% of the world's automobiles are concentrated in the three continents of Asia, Europe and North America, of which Asia automobile production accounts for 56% of the world, Europe accounts for 20%, and North America accounts for 16%. The world major automobile producing countries include China, the United States, Japan, South Korea, Germany, India, Mexico, and other countries; among them, China is the largest automobile producing country in the world, accounting for about 32%. Japan is the world's largest car exporter, exporting more than 3.5 million vehicles in 2022.
