The usage-based insurance for automotive is a method to calculate the insurance premium. The amount of insurance premium is decided on the basis of a driving score which is calculated by considering factors such as vehicle usage, location, speeding, braking, cornering, night driving, and distracted driving. Based on the driving score, automotive insurance providers offer a discount on the insurance premium. Ambiguity over regulations and legislative environments are acting as a restraint for the usage-based insurance market as usage-based insurance providers need to plan new product for different states within a country.
