Automotive vacuum braking system is a critical component of modern vehicles that enables efficient and reliable braking by utilizing a vacuum-based power assist mechanism. This system aids the driver in exerting less force on the brake pedal to achieve effective braking, enhancing safety and control. It consists of a vacuum booster, brake master cylinder, vacuum pump, check valves, and associated control elements.

The vacuum booster utilizes the negative pressure generated by the engine's intake manifold to amplify the force applied to the brake pedal, resulting in improved braking performance.
