A vacuum valve is a device that directs the flow of air or fluid to create a vacuum. Vacuum valves are operated inside machinery that use gauges and switches to control the flow of air or pressure inside the valve and release the pressure when needed for its application. The valve is opened by the operator with the use of the switch mechanism.

Vacuum valves can be found in cars using vacuum pressure for different controls and applications in the vehicle. The vacuum valves that work inside of a car are similar in function to larger vacuum valves found in industrial machines.
