The global Automotive Wide Angle Diffuser market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of % from 2026 to 2032.

In contrast to the diffractive optical components (DOEs), which are limited to small angles and moderate ambient conditions and have an intensity distribution that drops flat towards at the edges, the diffuser technology takes a different approach: Glass refractive optical elements can disperse laser light in one direction up to a full illumination angle ranging from a few mrad to over 100°. When combined with a second functional surface, the light can also be shaped at any desired angle in the other direction, making it possible to obtain a rectangular field with a steep edge slope and a user-defined size of 125° x 25°, for example. This is beneficial for noise reduction and increases the signal-to-noise ratio, and it also enhances the range of the LiDAR sensors as a result.

United States market for Automotive Wide Angle Diffuser is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.

China market for Automotive Wide Angle Diffuser is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.
