In 2024, global automotive wireless battery management system production reached approximately 1.92 million units, with an average global market price of around US\$800 per unit. In 2024, the global 's total production capacity of automotive wireless battery management system reached 2.53million units. The industry average gross profit margin of this product reached 34%.

An Automotive Wireless Battery Management System (wBMS) is a technology that uses wireless communication protocols, such as Bluetooth or proprietary RF networks, to monitor and manage battery performance in electric vehicles (EVs) . It eliminates the need for traditional wired connections, which reduces the vehicle's weight and complexity . By providing real-time data on cell voltage, temperature, and health, it helps optimize battery life, ensure safety, and support features like over-the-air updates . This system is crucial for enhancing the efficiency and scalability of modern EVs.

The wBMS supply chain involves upstream semiconductor and component suppliers who provide core chipsets and hardware. Midstream, companies like Marelli and Visteon integrate these components into complete systems. These systems are then supplied to downstream automotive original equipment manufacturers (OEMs), including General Motors, which uses wBMS on its Ultium platform for mass-produced electric vehicles.
