## Abstracts

The global Automotives Infrared Cores market size is predicted to grow from US$ 292 million in 2025 to US$ 743 million in 2031; it is expected to grow at a CAGR of 16.8% from 2025 to 2031.

The impact of the latest U.S. tariff measures and the corresponding policy responses from countries worldwide on market competitiveness, regional economic performance, and supply chain configurations will be comprehensively evaluated in this report.

The on-board(automotives) infrared movement is a core automotive electronic component based on infrared thermal imaging technology. It generates images by detecting the thermal radiation of objects, can penetrate fog and eliminate glare, and achieve ultra-long-distance (such as 300 meters) target recognition (such as pedestrians and vehicles) in harsh environments such as night, rain and snow. It is widely used in night vision assisted driving, automatic driving warning systems and intelligent cockpit environment monitoring; it is expected that the growth rate of the on-board infrared movement market segment in 2025 will be significantly higher than that of the overall industry, and will maintain high prosperity in the next three years.

United States market for Automotives Infrared Cores is estimated to increase from US$ million in 2024 to US$ million by 2031, at a CAGR of % from 2025 through 2031.

China market for Automotives Infrared Cores is estimated to increase from US$ million in 2024 to US$ million by 2031, at a CAGR of % from 2025 through 2031.

Europe market for Automotives Infrared Cores is estimated to increase from US$ million in 2024 to US$ million by 2031, at a CAGR of % from 2025 through 2031.
