The global Automotives Pure Solid State Blind Spot LiDAR market size is predicted to grow from US\$ million in 2025 to US\$ million in 2031; it is expected to grow at a CAGR of % from 2025 to 2031.

The characteristic of pure solid-state lidar is that there are no moving parts inside. Light emission and reception are completely completed through the chip. The total number of components is greatly reduced compared with traditional lidar, thus greatly improving detection performance and product reliability. In addition, due to its highly integrated architecture, pure solid-state lidar can be relatively compact and can be easily installed on the front and rear fenders, doors or front of the car. Blind-filling radar makes up for the areas not covered by long-range lidar.
