The global Autonomous Aircraft Flight Management Computers market size is predicted to grow from US\$ 2320 million in 2025 to US\$ 4900 million in 2032; it is expected to grow at a CAGR of 11.5% from 2026 to 2032.

Autonomous aircraft is a fully automated manned or unmanned aircraft that require minimum or no human intervention in its operations. Autonomous aircrafts can be identified with their ability to perform complex maneuvers for extended period of time at remote distances. Autonomous aircraft flight management computers are made of various avionics systems involving system-on-a-chip (SOC) & single-board computers (SBC) for controlling flight management systems such as navigation, flight path, and auto-pilot system among others. Further, installation of autonomous aircraft flight management computer system on an aircraft reduces the workload of operator.

Market CAGR for autonomous aircraft flight management computers is being driven by the rising adoption of artificial intelligence (AI). In hazardous environments or situations where people are unable to operate, autonomous aircraft lessen the hazards of human mistakes. The US Air Force revealed that it had set the goal of conducting a face-off between an autonomous drone armed with an artificial intelligence-driven flight management and control system and a fighter jet with a human pilot.
