The report requires updating with new data and is sent in 48 hours after order is placed.

The autonomous driving control unit is a cutting-edge platform with powerful computing power tailored for autonomous driving systems. The ADCU receives data from multiple sensors, such as cameras, radar, lidar, and cloud data (V2X), and obtains vehicle dynamics data from the VCU to support decision-making and route planning algorithms. The output of the ADCU will be used for driving state feedback, vehicle control and various autonomous driving functions.
