An autonomous driving data annotation platform refers to data infrastructure software (SaaS/private) for intelligent driving/autonomous driving research and development. It is used to import, organize, visualize, annotate, produce, quality check closed loop, version management and audit traceability of multimodal sensor data (camera images/videos, LiDAR point clouds, Radar, positioning and vehicle status, etc.) collected by the vehicle/road test. It is also integrated with training pipelines, data lakes/warehouses, evaluation and regression systems through API/SDK to form a core production system of 'data closed loop'. The gross profit margin of global autonomous driving data annotation platforms is estimated to be approximately 40.23% in 2025.

United States market for Autonomous Driving Data Annotation Platform is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.
