The global Autonomous Driving Parking Robot market size is predicted to grow from US\$ 440 million in 2025 to US\$ 1207 million in 2032; it is expected to grow at a CAGR of 15.6% from 2026 to 2032.

Autonomous Driving Parking Robot is an intelligent parking automation system designed to enable autonomous vehicle maneuvering, precise positioning, and automated slot allocation within structured and semi-structured parking environments. It combines autonomous driving algorithms, sensor fusion, control systems, and robotic lifting mechanisms to deliver end-to-end vehicle handling capability without human intervention, significantly improving operational efficiency in high-density urban parking infrastructure. Its advantages include higher parking space utilization efficiency, reduced labor dependency, improved vehicle turnover rate, and enhanced operational safety through autonomous decision-making and path planning. In 2025, the capacity utilization rate was about 70%, and the average gross margin was approximately 20%. Production in 2025 was 16071 units with an average price of 28000 USD per unit. The upstream segment includes servo motors, batteries, drive units, and controllers, with representative suppliers such as Siemens, Bosch, Panasonic, Mitsubishi Electric, Inovance Technology, and CATL. The midstream segment focuses on system integration, autonomous driving algorithm development, mechanical structure engineering, and parking management system integration. The downstream segment is primarily concentrated in public parking facilities and commercial parking operators, with representative customers including Prologis, Simon Property Group, Brookfield Properties, and China Resources Land.

The Robotic Parking system is a fully automatic parking system using robotic technology. With the adoption of AGV technology, users no longer need to look around

for empty parking spaces, but simply park their vehicles in the designated chambers and follow the instructions given by the parking and retrieval panel (PRP), the system will proceed the parking automatically.
