The global Autonomous Drone Surveillance Platform market size is predicted to grow from US\$ 418 million in 2025 to US\$ 829 million in 2032; it is expected to grow at a CAGR of 10.5% from 2026 to 2032.

An Autonomous Drone Surveillance Platform refers to an integrated drone-in-a-box system combining UAVs, automated docking/charging stations, mission-control software, AI video analytics, remote operations and data-management modules. It is mainly used for perimeter security, industrial inspection, infrastructure monitoring, ports, energy facilities, mining sites, borders and emergency response. In 2025, Global Autonomous Drone Surveillance Platform shipments are estimated at about 9,500 Sets, with an average ex-works system price of 45,000 US\$/Set.

Growth is driven by demand for unmanned inspection and continuous perimeter surveillance. Fixed cameras often leave blind spots across large industrial sites, ports, oil and gas facilities and mining areas, while drone-in-a-box systems can launch automatically on schedule or in response to alarms. Adoption is further supported by BVLOS operations, AI detection, thermal night monitoring, digital inspection records and labor-cost reduction, although regulation, cybersecurity, airspace control and reliability still constrain faster scale-up.
