Abstracts

The global Autonomous Electric Street Sweeper market size is predicted to grow from US$ 139 million in 2025 to US$ 668 million in 2032; it is expected to grow at a CAGR of 22.3% from 2026 to 2032.

An autonomous electric street sweeper is a battery-electric professional road-cleaning vehicle or robotic platform integrating environmental perception, high-precision localization, route planning, intelligent obstacle avoidance, autonomous driving and automated cleaning control. It performs sweeping, debris collection, vacuuming, washing, flushing and dust-suppression operations without continuous human driving. Typical systems integrate LiDAR, cameras, millimeter-wave radar, GNSS/RTK, IMUs and onboard computing platforms, while cloud-based fleet systems support task scheduling, remote monitoring, teleoperation, automatic charging, water refilling and waste dumping. The market includes compact and full-size autonomous electric sweepers used on sidewalks, campuses, parks, scenic areas, commercial premises, municipal roads and industrial roads. In 2025, the global sales volume of autonomous electric street sweepers is 2,450 units, with an average selling price of $58,000 per unit and an industry average gross margin of 20%–35%. The upstream supply chain mainly consists of steel, aluminum alloys, copper, engineering plastics, rubber and lithium-battery materials, while the midstream covers autonomous sweeper vehicle manufacturing, autonomous-driving system integration and intelligent sanitation platforms, and downstream demand comes primarily from municipal sanitation authorities, environmental-service contractors, industrial parks, campuses, parks and scenic areas, commercial property operators and transportation hubs.
