The global Autonomous Hybrid-Driven Underwater (HUG) Gliders market size is predicted to grow from US\$ million in 2025 to US\$ million in 2031; it is expected to grow at a CAGR of % from 2025 to 2031.

Hybrid-drive underwater glider is a new type of underwater glider that improves navigational positioning accuracy and maneuverability by adding fin rudder and propeller propulsion system, which makes up for the deficiency of underwater glider to a certain extent. Underwater glider is a new type of underwater robot driven by buoyancy, with low energy consumption and low noise. The cost is low, it meets the needs of long-term and large-scale ocean exploration, and it also has important military application value. However, because the underwater glider also has a low sailing speed and a complex marine environment, it is vulnerable to the influence of wind, waves and currents, and its track and positioning accuracy are low.

United States market for Autonomous Hybrid-Driven Underwater (HUG) Gliders is estimated to increase from US\$ million in 2024 to US\$ million by 2031, at a CAGR of % from 2025 through 2031.

China market for Autonomous Hybrid-Driven Underwater (HUG) Gliders is estimated to increase from US\$ million in 2024 to US\$ million by 2031, at a CAGR of % from 2025 through 2031.
