Autonomous Inflow Control Device (AICD) is an advanced equipment for optimizing oil and gas well production. It can automatically adjust the flow rate based on the properties of the fluids. It limits the flow of water and gas to delay water/gas invasion in the oil layer, balance the liquid production profile in the horizontal well section, maximize the oil well production and improve the oil and gas recovery rate. It is commonly used in horizontal well development and can reduce manual intervention and water treatment costs.
